PROFILE

Backend-focused System Developer working with data pipelines, ETL processes, and system integration. Designs and implements solutions that collect, transform, and normalize data across multiple sources. Strong focus on automation, reliability, and scalable data processing using XML, JSON, XSLT, and APIs.

TECHNICAL EXPERTISE

 **DATA & PIPELINES**
Python, SQL, ETL processes, Data normalization, Automation

 **BACKEND & APIs**
Django, ASP.NET, REST API development

 **DATA FORMATS & TRANSFORMATION**
XML, JSON, XSLT, XPath

 **DATABASES**
MySQL, SQL Server

 **TOOLS & PRACTICES**
Git, Web scraping, Logging, Retry strategies, Rate limiting

EXPERIENCE

System Developer – Lund Municipality

Dec 2025 – Present

- Develop and maintain backend systems for data processing and system integration
- Build ETL workflows for ingestion, validation, and normalization of structured data
- Transform data using XML, JSON, and XSLT across multiple data flows
- Implement web crawlers with logging, retry logic, and rate limiting
- Deliver compiled GUI-based tools to support internal data handling processes

PROJECT

Meeting Aggregation Platform (nameetings.cloud)

- Designed and built an ETL pipeline processing data from 40+ global sources
- Implemented ingestion, validation, normalization, and transformation workflows
- Integrated multiple APIs and standardized heterogeneous data formats
- Developed admin system with full CRUD functionality for data management

EDUCATION

- **Full Stack Software Development** – Code Institute (2022–2024)
- **.NET Developer** – Lexicon Malmö (2023)
- **Pedagogics** – University College Kolding (2012–2016)

PREVIOUS EXPERIENCE

- **Preschool Teacher** – Landskrona Municipality 2018–2022
- **Preschool Teacher** – Malmö Municipality 2016–2018
